Scope of the Online Book Store Project

- 1. **Book Catalog**: The online bookstore will have a comprehensive catalog of books, categorized by genre, author, publication year, and other relevant parameters. It will allow users to browse through the catalog and select books of their choice.
- 2. **Search and Filter**: The platform will provide a robust search functionality, allowing users to search for books using various parameters such as book title, author name, ISBN, and keywords. Additionally, users will be able to filter the search results based on categories, price range, publication date, and more.
- 3. **User Accounts**: Users will be able to create their own accounts, which will allow them to manage their profile, track their orders, save their favorite books, and receive personalized recommendations.
- 4. **Shopping Cart and Checkout**: The platform will provide a shopping cart feature where users can add their selected books and proceed to checkout for payment. Multiple payment options should be available, including credit/debit cards, net banking, and digital wallets.
- 5. **Order Tracking**: After placing an order, users should be able to track the status of their order until it is delivered to them.
- 6. **Reviews and Ratings**: Users should be able to rate and review the books they have purchased. This will help other users in making informed decisions.
- 7. **Recommendation System**: The platform should have a recommendation system that suggests books based on the user's browsing history, past purchases, and ratings.
- 8. **Customer Support**: The platform should provide customer support to assist users with any issues or queries they might have regarding the use of the platform, order placement, payment, or any other concerns.
- 9. **Security**: The platform should ensure the security of the users' personal and financial information. It should comply with all relevant data protection and privacy laws.
- 10. **Mobile Compatibility**: The platform should be compatible with various devices, including desktops, laptops, tablets, and smartphones, ensuring a seamless user experience across all devices.

This scope is a high-level overview and can be expanded or modified based on specific project requirements and business needs.
